

DOG and CAT VACCINATIONS

DOGS

DHLP-P - *Distemper, Hepatitis, Leptospirosis, Parainfluenza, Parvovirus.*

Vaccine begun at 2 months of age, given every 3 - 4 weeks, until 4 months of age. Then give every year. Can be given at 6 weeks of age if necessary, and if begun after 3 months of age only 2 vaccinations, 3 - 4 week apart, are given.

RABIES

Give first vaccination at 4 months of age, then 1 year later. After that give every 3 years.

LYME

Given to animals at risk only. Begin at 3 months of age or older. Give 2 vaccinations, 2 weeks apart. Then give once a year.

HEARTWORM TESTING

Test dog before putting on a preventative, if dog is over 8 months of age. Then retest each year. Always keep on preventative. Puppies start at 6 weeks old.

CATS

PRC - *Panleukopenia, Rhinotracheitis, Calicivirus*

Vaccine begun at 2 months of age, given every 3 - 4 weeks until 4 months of age. Then given every year. Can be given at 6 weeks of age if necessary and if begun after 3 months of age only 2 vaccines, 3 - 4 weeks apart, are given.

RABIES

Give first vaccination at 3½ months of age, then 1 year later. After that give every 3 years.

LEUKEMIA

Best to test before vaccinating. Begin at 9 weeks of age and give 2 vaccines, 3 weeks apart. Then give every year.

LEUKEMIA TESTING IS RECOMMENDED for all cats under 8 months.

LEUKEMIA / AIDS TESTING IS RECOMMENDED for all cats 8 months and older.
